

# Statistical physics of multiscale modelling

## VARIAMOLS / HAMMOCK Group retreat 2022

October 20-22, 2022  
Fontana dei Gai, Trento, Italy

### PARTICIPANTS

Raffaello Potestio                      Lorenzo Petrolli  
Roberto Menichetti                  Giovanni Mattiotti  
Thomas Tarenzi                        Manuel Micheloni  
Raffaele Fiorentini                    Margherita Mele

## SCOPE OF THE MEETING

This two-day workshop will gather the group members of the ERC-funded VARIAMOLS project and of the HAMMOCK project supported by the Italian Ministry of University and Research, both based in the Physics Dept. of the University of Trento.

The work carried out within these strongly interacting groups will be discussed in an informal environment, with the aim of fostering tighter collaborations, find solutions to open problems, and develop strategies for the future activities of the groups in the broad field of multiscale modelling - from its foundations to applications.

Last but not least, this event will constitute a unique opportunity for team-building and thinking outside of the box.
